# Action elements

User can interact with application via actionable components. Here is a list of them.

## Switch

| First | Second | Third | Forth |

## Buttons

**BUG: button does not change its size depending on content**
**???: button does not have default spacings between each-other**

| Primary | Primary disabled | Secondary | Secondary disabled |

| With border | | | With border disabled |

| Wide |

### Button group has spacings between

| Grouped | | Buttons |

### Button size: small

| Grouped | small | Buttons |

### Button size: mini

| Grouped | mini | Buttons |

### Button without mobile adaptation

Any button can be set as no-responsive - so it will not change its size on mobile screens

| Grouped | mini | Buttons |

Buttons as links

Primary

Primary disabled

With border

# Visual elements

Those components are only for information, user is not able to interact with them. But their state can be changed via other components, like buttons.

## Steps

To Do

In Progress

Done

## Alerts

There are several types of alerts.

Success

Secondary

Info

Error

Transparent

## Panels

### This is a simple panel

Here we can see some child elements

### This is an loading panel

## Tables

| NON SORTABLE COLUMN | SORTABLE COLUMN ⬍ | ANOTHER COLUMN |
| --- | --- | --- |

| Cell content | Cell content | Cell content |

## Modals

We have modals can be closed by cross or ESC key, wide, small, borderless, overlaped and wide. Watch source code.
